AESTHETIC FACIAL EXPERIENCES

DIAMOND MICRODERMABRASION

30 mins / USD 130

Slough away dead skin cells, reduce the size of pores, improve the appearance of sun damage, wrinkles, fine lines, age spots, acne scarring and other skin-related concerns. The advanced Diamond Microdermabrasion system renews overall skin tone and texture, and is strong enough to clear and exfoliate but gentle enough for the most sensitive of skins. This minimally invasive procedure increases blood flow and helps to produce collagen.

LED RED LIGHT THERAPY

30 mins / USD 120

LED therapy uses low-intensity light-emitting diodes (LEDs) in a process similar to photosynthesis (in which plants use chlorophyll to convert sunlight into cellular building blocks). The light stimulates the production of collagen and elastin, suppressing collagenase, the enzyme that breaks down collagen and accelerates ageing. The Bio-Synthesis system uses the latest technology and treatment principles that stem from extensive research, data and efficacy studies on photosynthesis conducted by NASA.

GALVANIC IONTOPHORESIS

30 mins / USD 140

Galvanic Iontophoresis therapy involves the use of mild electric currents, consisting of positive and negative ions, to refresh, stimulate and rejuvenate the skin. It uses iontophoresis to transport electronically charged particles (ions) into the skin. This advanced therapy promotes the absorption of products used on the skin, driving them deeper into the pores to increase hydration, circulation, radiance and firming. This helps reduce the appearance of fine lines and wrinkles, and gives a dewy fresh appearance. Recommended for most skin types, including sensitive skin.

PLATELET RICH PLASMA

1.5 hours / USD 380

The 'Vampire Facial' is popular for those seeking a natural method to rejuvenate their skin and stimulate healing. PRP is tissue regeneration with your own blood cells. Your blood platelets are harvested and treated to extract growth factors and specialised cells involved in the healing process (post-injury) and cell regeneration. This concentrated plasma is enriched with your own platelets, growth factors and natural stem cells. Platelets are blood cells with several crucial functions. They contain important growth factors that, when secreted, are responsible for tissue regeneration, increasing collagen production, initiating vascular re-growth, inducing cell differentiation and extra-cellular matrix formation. Growth factors and stem cells also increase cellular turnover and collagen production, which promotes youthful, glowing and radiant skin. When growth factors are stimulated by a PRP treatment, collagen production is boosted, helping to improve the appearance of age-related skin damage, including wrinkles, scarring and fine lines.

DERMAPEN MICRONEEDLING

1 hour / USD 280

Erase your skin's history and try one of the most popular anti-ageing treatments in the world. Microneedling has been used for centuries to produce microscopic channels as a way to regenerate skin cells and improve skin texture. Dermapen is an advanced skin needling treatment that increases collagen production and skin regeneration. It also increases product absorption x 1000. Dermapen increases collagen production up to 400% and leads to reorganisation of old collagen fibres and laying down of new collagen, elastin, and capillaries. It can also reduce the appearance of scars, wrinkles and lines.

BIO CELL FACIAL

1.5 hours / USD 610

Diamond Microdermabrasion · PRP Cell Rejuvenation · Galvanic Infusion · LED Red Light Therapy

The powerful PRP (active stem cells cultured from your own blood) repairs cells and encourages the growth of new ones. It activates deep tissue to tighten and firm the skin. The treatment also includes a Diamond Peel to deeply exfoliate the skin and LED Red Light Therapy to stimulate the growth of new collagen. The treatment cleans, exfoliates, tightens and hydrates, so it's a one-stop treatment for anti-ageing.
